

Descriptions

Air Quality Node is designed for environment monitoring and controlling in industrial, commercial and other buildings. These transmitters can be used to monitor air quality and temperature in various industrial and commercial settings. Modbus RS485/Bacnet MS/TP for direct digital reading on all models.

Highlights:

- The RS485 are hardened up for overvoltage and power supply crossed over.
- Display in degrees Fahrenheit or Celsius(connection to Bacnet).
- The LCD is a bitmap so we can show network connectivity.
- The user can configure what they want to show on the display: network activity, baud rate, protocol, etc.
- You can show a user setpoint so you can use it as a room / setpoint display.
- RS485/ Modbus/RTU for direct digital reading on all models

AQ-N-LCD

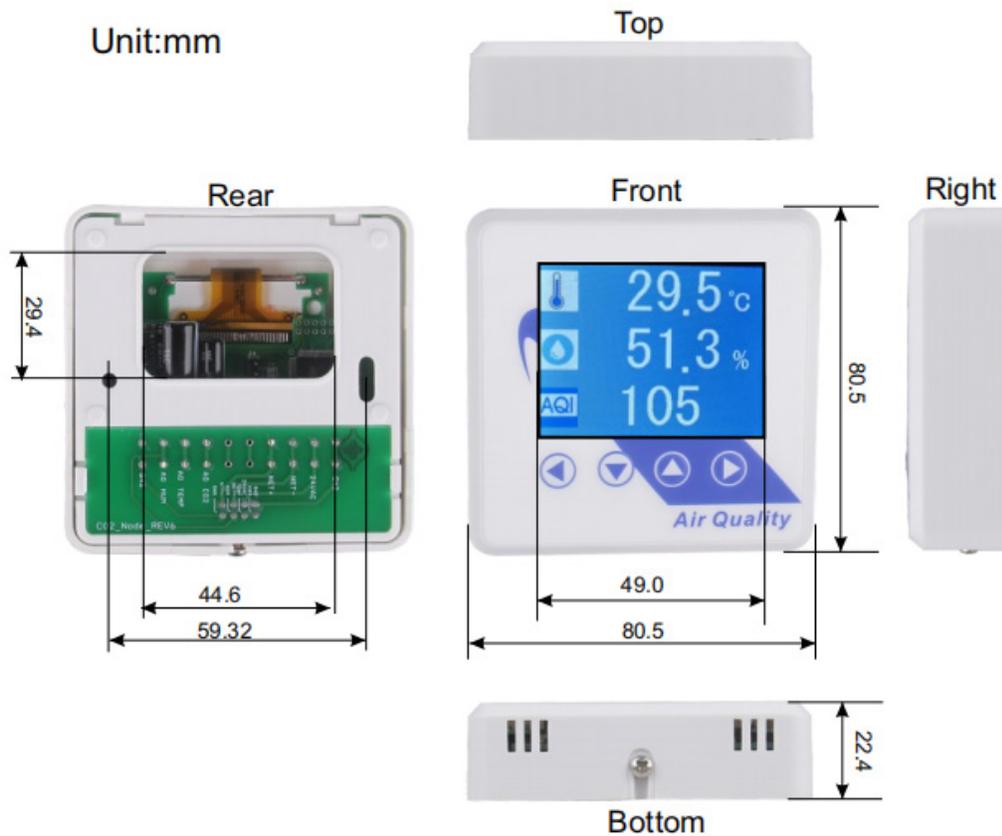

AQ-N

Specifications

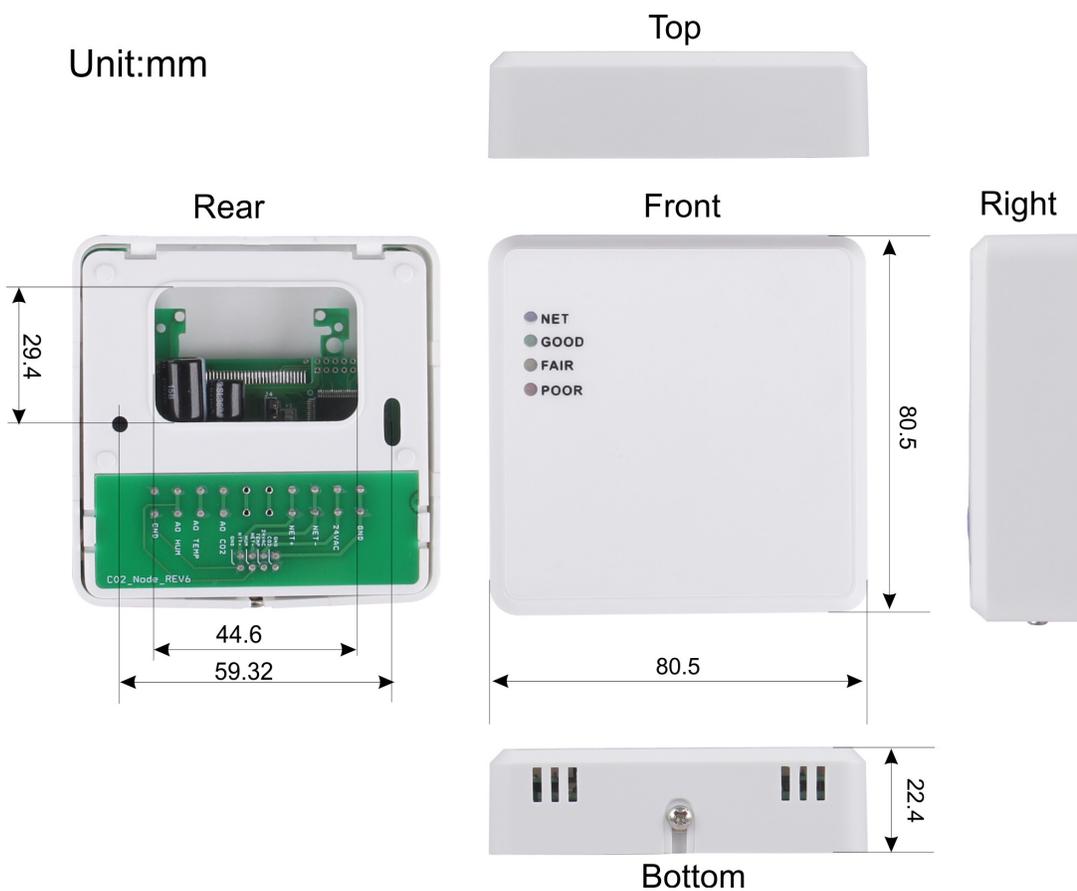

Typical Application	Wall mount indoors	
RS485 ports	1	
Power	15-24V +/- 10%, AC or DC, 1 watt typical	
Operating Temp	-30~+60°C, 0-95% non condensing	
Plastic Housing	Flammability rating UL 94V0 file E194560	
Display	LCD screen, Resolution 0.1°C, 0.1% RH	
Control Features	N/A	
Analog	Output 10v 4-20mA	
Protocols	Bacnet&Modbus	
TEMP	Sensor Type	10K thermistor
	Range	-40~150°C(-60~340°F)
	Accuracy	< ±0.5°C @ 25°C
	Output	4-20mA, 0-5V or 0-10V, RS 485
Relative Humidity	Sensor Type	Capacitance polymer
	Range	0~100% non condensing
	Accuracy	3% RH (25°C, 20~80% RH)
	Output	4-20mA, 0-5V or 0-10V, RS 485
AQ	Sensor Type	TGS2600
Size	80.5 (L)x 80.5(W)x22.4(H)mm	

Dimension

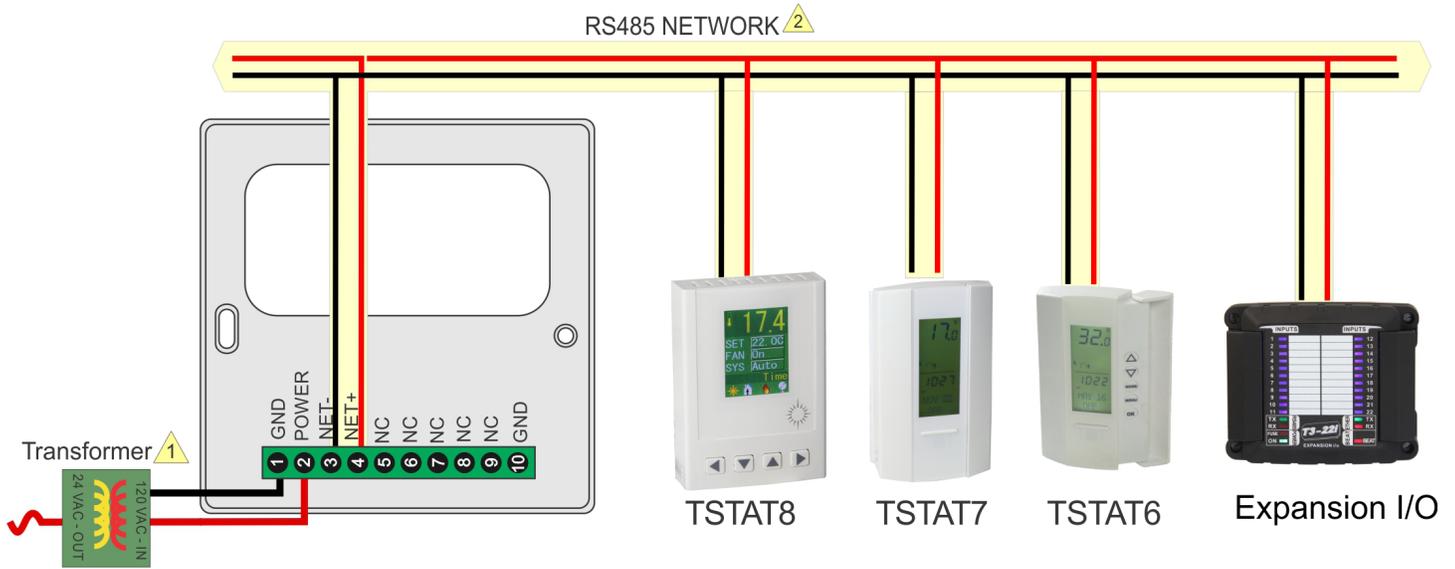

AQ-N-LCD

AQ-N

Backplate Features

- 1 Power Supply, 15 to 24V, AC or DC
- 2 RS485 Net, 18ga twisted pair typical, optional ground & shield

Installation instructions

Flat screwdriver tip

To insert wires into the nuscrew terminals there is a small trick which may not be apparent to folks who have not used these terminals before. Strip the wire about half a centimeter and twist the stands together if its stranded conductor, Gently press the end of a sall flat screwdriver into the wire entry port, insert the wire into the hole while maintaining pressure with the screwdriver. Release the screwdriver and the connection is made. Tug on the wire to make sure there's good contact the wire should not pull out.

Instrument Operation

There are four keys. The first and second keys are used to increase and decrease the value and select the up down list. When click the third key, it will be back to the previous view layer. And click the forth key, it will switch to the next item.

Increase value or select up list

Decrease value or select down list

Menu display chart

The following value was taken as an example so you can understand it well.

Temperature	1. Int: 23.0°C 2. Ext: 18.2°C 3. Unit: °C/ °F 4. Sensor disp.: Ext./Int.	
Humidity	1. Calibration: 34.9% 2. Heat: ON/OFF	
Miscellaneous	1. Modus ID: 251 2. Date: 2014-12-17 3. Time: 11:00 4. Ring on time: 2 5. Ring off time: 2 6. Baudrate: 19200 7. Factory reset 8. Use password: Yes/No 9. Password	

a. Normal state:

Zone0: 37.4% 17.0°C
1149 ppm
 2014-12-17 11:00 NET

b. Please press , come back to the menu column. Press  or , and select Temperature, then press , go into the temperature list.

1.CO2 2.Temperature 3.Humidity 4.Miscellaneous	→	1.CO2 2.Temperature 3.Humidity 4.Miscellaneous
--	---	--

c. Please press , come back to the menu column. Press  or  and select Humidity, while press , go into the humidity list.

1.CO2 2.Temperature 3.Humidity 4.Miscellaneous	→	1.Calibration: 35.5% 2.Heat: OFF
--	---	-------------------------------------

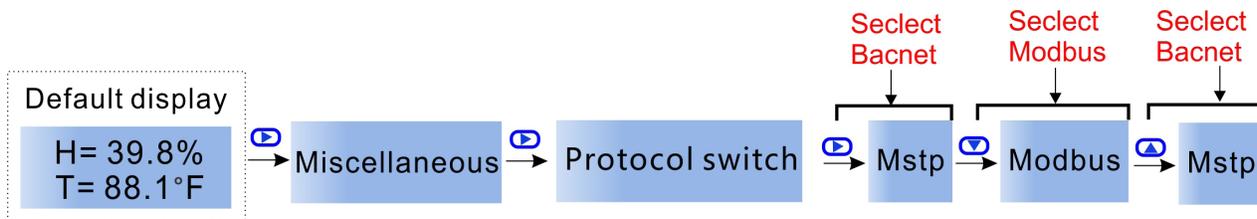

d. Please press , come back to the menu column. Press  or  and select Miscellaneous, continue to press , go into the miscellaneous list.

1.CO2 2.Temperature 3.Humidity 4.Miscellaneous	→	1.Modbus ID: 251 2.Date: 2014-12-17 3.Time: 11:00 4.Ring on time: 2 5.Ring off time: 2
--	---	--

e. When everything is set, after a while, it will switch to the normal state as step as displayed.

Modbus/Bacnet switch

To select the protocol as Modbus or Bacnet, Press  to choose Miscellaneous, then press  to choose Protocol switch, press , it reads Mstp, which means you have selected Bacnet ;if you want to switch to Modbus, press , or  back to Bacnet.

Or you can check the Bacnet Resgister List, No.9: Protocol switch. 0 = MODBUS, 1=MSTP.

Modbus Register List

Address	Bytes	Register Description
0 to 3	4	Serial Number - 4 byte value. Read-only
4 to 5	2	Software Version – 2 byte value. Read-only
6	1	ADDRESS. Default Modbus device address=254
7	1	Product Model. This is a read-only register that is used by the microcontroller to determine the product
8	1	Hardware Revision. This is a read-only register that is used by the microcontroller to determine the hardware rev
9	1	PIC firmware version
10	1	PLUG_N_PLAY_ADDRESS, 'plug n play' address, used by the network master to resolve address conflicts. See VC code for algorithms
15	1	Baudrate Setting: 0 = 9600bps, 1 = 19200bps,2=38400bps,3=57600bps,4=115200bps
16	1	Firmware Update Register, used to show the status of firmware updates
17 to 99		Blank, for future use
100	2	adc value of co2 voltage output, not used, read only
101	2	adc value of temperature voltage output, not used, read only
102	2	adc value of humidity voltage output, not used, read only
103	2	adc value of co2 current output, not used, read only
104	2	adc value of temperature current output, not used, read only
105	1	adc value of humidity current output, not used, read only
106	2	adc value of on board thermistor sensor, read only
107	2	adc value of on board light sensor, read only
108	2	co2 value (ppm). It will be calibrated if write to it.
109	2	co2 calibration offset. User can change it to calibrate the co2 ppm. It will be changed also if user write the data to register co2 ppm
110	1	Delta value for eliminating the pulse ppm value. The default value is 200.
111	2	Filter times, make the ppm value go smooth. The default value is 5.
112	2	The fair alarm ppm setpoint of co2 sensor.
113	2	The poor alarm ppm setpoint of co2 sensor.
114	1	co2 alarm status:
		0b'xxxx 1xxx': co2 poor
		0b'xxxx 01xx': co2 fair
		0b'xxxx 001x': co2 good
115	1	the version number of humidity sensor
116	2	the relative humidity
117	2	the frequency value read from humidity sensor, read only
118	1	the number of calibration points of the humidity sensor
119	2	degree celsius temperature value of the humidity sensor
120	2	degree fahrenheit temperature value of the humidity sensor
121	2	celsius degree temperature value of the on board thermistor sensor

Modbus Register List

Address	Bytes	Register Description
123	2	the offset for calibrating the on board thermistor sensor
124	1	select the temperature direct to analog output: 0: on board thermistor sensor, default setting 1: humidity sensor
125	1	select the temperature unit direct to analog output: 0: degree celsius 1: degree fahrenheit, default setting
126	2	Lighting value, for feature
127	1	analog output mode, change it by setting the jumper (J20) on the board, read only
128	2	the minimum value of temperature directs to the analog output
129	2	the maximum value of temperature directs to the analog output
130	2	the minimum value of humidity directs to the analog output
131	2	the maximum value of humidity directs to the analog output
132	2	the minimum value of co2 directs to the analog output
133	2	the maximum value of co2 directs to the analog output
		e.g. co2 output: if the co2 ppm is 1000, the (minimum value, maximum value) = (0, 3000), then
		1. setting J20 to select 0V-10V output mode, so the co2 output is about $((1000\text{ppm} / (3000\text{ppm} - 0\text{ppm})) * (10\text{V} - 0\text{V})) + 0\text{V} = 3.3\text{V}$
		2. setting J20 to select 0V-5V output mode, so the co2 output is about $((1000\text{ppm} / (3000\text{ppm} - 0\text{ppm})) * (5\text{V} - 0\text{V})) + 0\text{V} = 1.65\text{V}$
		3. setting J20 to select 4mA-20mA output mode, so the co2 output is about $((1000\text{ppm} / (3000\text{ppm} - 0\text{ppm})) * (20\text{mA} - 4\text{mA})) + 4\text{mA} = 9.3\text{mA}$
184	2	AQ value
500	1	co2 automatic compensation background enable or disable. 0 = Disable, 1 = Enable.
501	2	"Background CO2", default is 400ppm, minimum is 390, max is 500.
502	1	Maximum adjustment per day" default is 1ppm, max is 10 ppm, minimum is 1.
503	1	"Number of days to watch for minimum", default is 7 days. Max is 30 days. Minimum is 2 days.
505	2	co2 background calibration offset.

T3000 Operation

1. Visit <https://temcocontrols.com/ftp/software/09T3000Software.zip>, download T3000 software and install it;
2. Start T3000 software, click  to scan
3. Connect AQ-N-LCD to PC by RS485, start T3000 software

The screenshot shows the T3000 Building Automation System software interface. The main window is titled "T3000 Scanning" and displays the message "T3000 is scanning, please wait." Below this message is an "Exit" button. A table shows the scanning progress for various modes:

Scanning Mode	Status	Reply	Notes
Ethernet Scan	Running	0	Send UDP broadcast package to device..
COM10 9600	Detecting	0	Automatic detecting ,please wait!
COM10 19200	Detecting	0	Automatic detecting ,please wait!
COM10 38400	Detecting	0	Automatic detecting ,please wait!
COM10 57600	Detecting	0	Automatic detecting ,please wait!
COM10 115200	Detecting	0	Automatic detecting ,please wait!
Bacnet MSTP	Wait	0	

Red annotations on the screenshot include "click to scan" pointing to a magnifying glass icon in the toolbar and "click to close" pointing to the close button in the window's title bar.

4. By connecting the T3000, the correction is performed using registers
